The Munich High End Show 10/13-05-2018

For this year's Munich High-End show, Trinnov has teamed up with several renowned audio manufacturers to deliver the highest sound quality possible

As always, Trinnov's approach to high performance is both pragmatic and effective. To showcase the power of the Altitude as a hi-fi preamp and its endless possibilities when it comes to bi/tri/quad-amplification, we picked a longtime collaborator and elite speaker brand Bohne audio from Germany.

They will complement the Trinnov Altitude with a complete package using their B12/18 speakers with an additional two 18" subs for guaranteed goosebumps.

These fully active speakers are already optimized for digital crossover setups and are a match made in heaven for Trinnov's advanced bass management and room optimization software.

Building on the success of last year, we will again stream high-resolution content through Roon and showcase how the high fidelity streaming solution is perfectly integrated into Trinnov products and how the playback experience would be benefitted from a high quality digital playback system.

We also wanted to promote the work of our friends at MSM studio who are pioneers in creating high-resolution audio content. To do so, we have invited Stefan Bock of MSM to give a presentation including the most recent album of Alessandro Quarta in Pure Audio format.

But we are not only focused into the digital world and know how beautifully vinyl can sing on a well-tuned system. At this years Munich High-End, we will also play some carefully selected vinyl on an Origin Live turntable with marching tonearm through an AS Audiospecials preamp.

Finally, the Munich show would not be complete without a glimpse of the future and the state of research, so we will also present you our latest project in Object-based audio via Trinnov R&D engineer Benjamin Duval who has been working on the European Project Orpheus for us.

If you are attending : please come and visit us at Atrium 4.2 – F203 !

Best Regards,
Trinnov High End Team
